System Overview

Harmony is web based Order and Inventory management system customized to DoReMi, a music retailer. The platform is targeted at internal users of DoReMi in the Sales, Accounts and Warehouse departments. Users are able to perform the tasks listed below:

Sales	Accounts	Warehouse
<ul style="list-style-type: none">• Make Order	<ul style="list-style-type: none">• Evaluate Customer Credit Risk• Approve Order	<ul style="list-style-type: none">• Approve Inventory Restock Request

User Interface

Angular is used Harmony's front end user interface.. Once our rules and workflow inference engine outputs the result, which would be sent to Angular to display the results onto the web interface.

Requirements

Harmony supports the following web browsers:

- Internet Explorer 11
- Microsoft Edge 39 and above
- Firefox 53 and 52 ESR and above
- Google Chrome Version 59 and above
- Safari Version 10 and above

Deployment

To run the system in Linux Server

1. open terminal/git bash
2. `$ git clone //todo:git_url`
3. unzip folder
4. `$ cd folder_location/DoRemi-service`
5. make sure jdk 1.8 is installed
6. make sure maven installed
7. `$ chmod 777 launch.sh`
8. `$./launch.sh clean install`

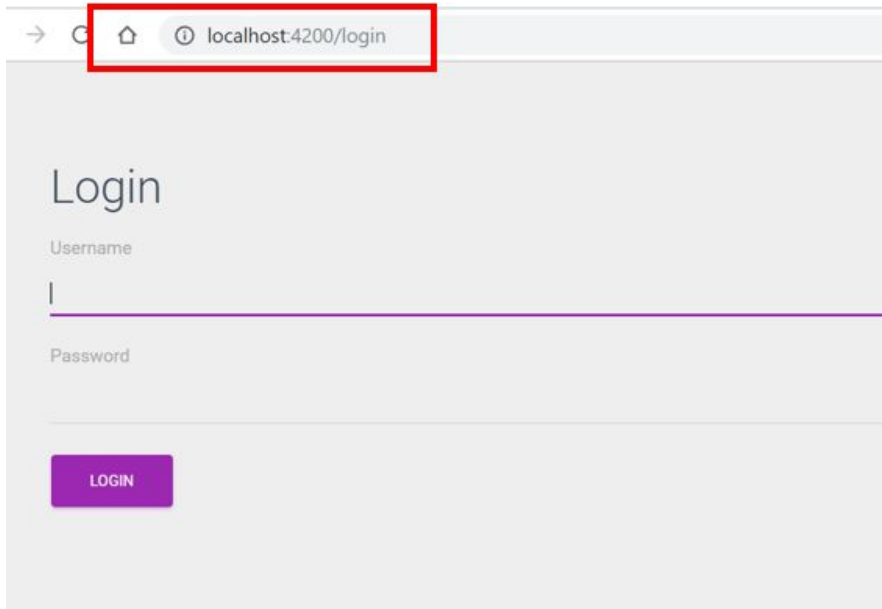

9. Go to URL using web browser Should be able to see a page with content "DoReMi-service-1.0-SNAPSHOT" via <http://localhost:8090>
10. \$ cd folder_location/ang-doremi
11. \$ npm install -g @angular/cli
12. \$ npm install
13. \$ ng serve --open
14. Go to URL using web browser <http://localhost:4200>
15. The default configuration is running under h2 in-memory database
16. Once the backend application is stopped, all the data will be lost
17. To persist the data, the backend application support running on actual database server

To run the backend application in PostgreSQL

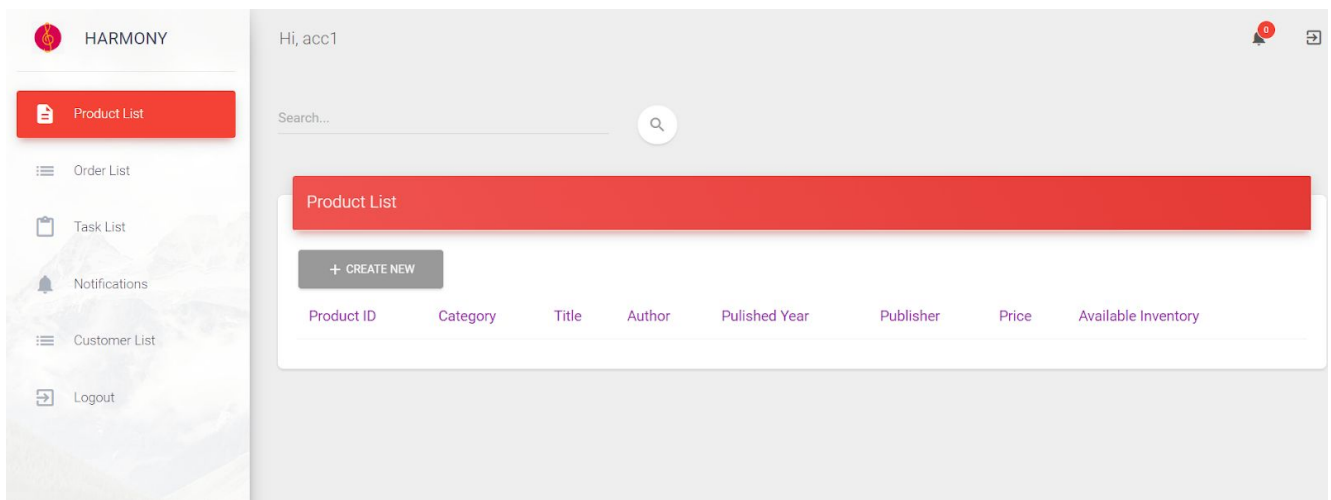

1. Refer to https://docs.jboss.org/jbpm/release/7.17.0.Final/jbpm-docs/html_single/#_run_your_business_application for more details
2. install postgresQL 11.1
3. \$ cd folder/location/DoReMi-service
4. \$ psql -U postgres -f psql-script/create-user-db-grant.sql
5. ** change application configuration **
6. \$ rm src/main/resources/application.properties
7. \$ mv src/main/resources/application-postgres.properties src/main/resources/application.properties
8. \$./launch.sh clean install -Ppostgres

Get Started

Open up your preferred browser and go to the URL "http://localhost:4200/login" as shown below:

Enter the credentials provided in the Test Data.xlsx file. Upon successful login, the Harmony user interface will be presented:

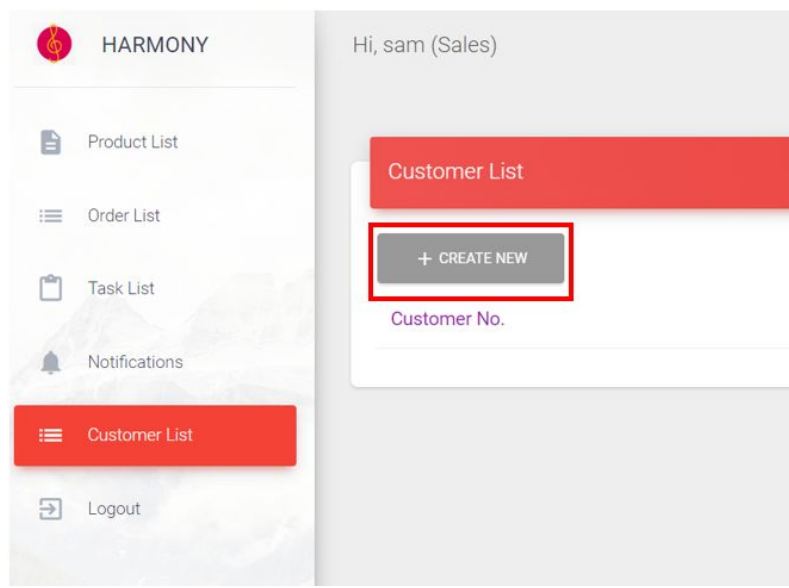

Walkthrough

The following section will provide a step by step walkthrough of the various actions which DoReMi users can perform within Harmony

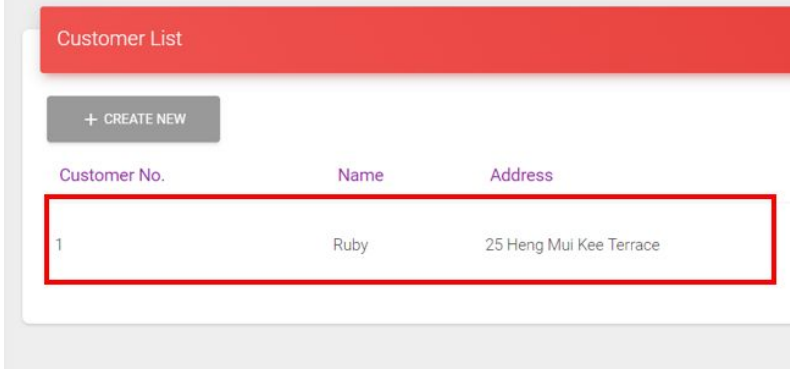

All Roles: Create Customer

1. From the Navigation Panel, select 'Customer List' and select 'Create New'.

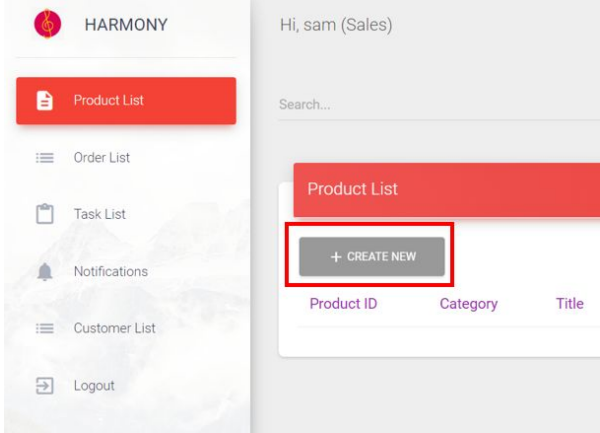

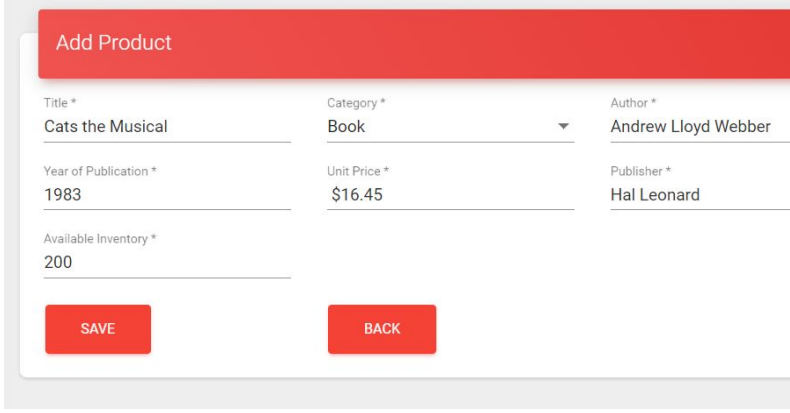

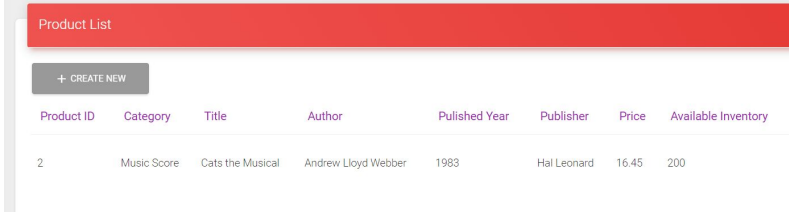

2. Create a New Customer by inputting the following details:
Date Registered: 01/01/2019
